SUMMARY OF

INDEX

SIMPLE GOITER
TOXIC GOITER
THYROID CARCINOMA
THYROIDITIS
MISCELLANEOUS

*if you found it useful
kindly share!*

GOITER

- CONG. GOITER.
- INFLAM. GOITER. (THYROIDITIS)
- NEOPLASTIC GOITER

SIMPLE GOITER

NON inflam., NON NEOPlastic & NON TOXIC ENLARG. of thyroid gl. (EUTHYROID) DUE TO

I₂ DEFECIENCY
(100-125 µgm / day)

- **ABSOLUTE** ↓: WATER supply AS IN OASIS & MOUNTAINS.
- **RELATIVE** ↓: DURING STRESS PERIODS of life AS PUBERTY - PREGNANCY - LACTATION.

DEFECTIVE SYNTHESIS
of Th. HORMONES

Goitrogenic subst.

ENZYME defeciency

- 1) DIET: Cabbage - Cauliflower
- 2) WATER poluoTION.
- 3) DRUGS CONTAINING I₂:
 - A) Asthmatic pts.
 - b) Anti-thyroid.

TOXIC GOITER

	1 ^{RY} TOXIC GOITER (GRAVE'S DS.)	2 ^{RY} TOXIC GOITER (PLUMMER'S DS.)	SOLITARY TOXIC NODULE
AGE	YOUNG ♀ 20 - 30	Middle AGE ♀ 30 - 40	OCCUR AT ANY AGE.
ETIOLOGY	Type V HS	Longstanding SNG.	<ul style="list-style-type: none"> ✓ SNG ✓ functioning follicular adenoma
ONSET	Sudden	Gradual	Gradual
COURSE	FLUCTUATING.	PROGRESSIVE.	PROGRESSIVE
CL./P	<ul style="list-style-type: none"> • ACROPATHY • PRETIBIAL MYXEDEMA • TRUE EXOPHTHALMOS. 	False exophthalmos. <u>INVEST.:</u> AS GRAVE'S BUT Th. SCAN <i>shows hot nodule dt active nodules or inter-nodular nodular t.</i>	
MAIN MANIFEST.	<ul style="list-style-type: none"> • NERVOUS + METABOLIC • HSM + LN⁺⁺ 	• CVS dt old AGE.	<ul style="list-style-type: none"> • Old → CVS • YOUNG → CNS
THYROID GLAND	<ul style="list-style-type: none"> • Diffuse ++ • Mass with toxicity. • Hyper-vascularity. 	<ul style="list-style-type: none"> • Nodular & firm. • Mass b4 toxicity. 	• Single nodule in normal gland.
TTT.	<ul style="list-style-type: none"> • Mainly Medical. • <u>If failed OR RSG:</u> <ul style="list-style-type: none"> < 45 ys. = STT. > 45 ys. = I¹³¹ 	<ul style="list-style-type: none"> • STT after prep. • I¹³¹ if HF. 	I¹³¹ of choice OR Hemithyroidectomy after prep.

TYPES OF SIMPLE GOITER

“Stress → relative ↓ of I_2 → ↓ T_3 T_4 □ ↑ TSH → Hyperplasia & Hypertrophy of the gl. “

	SIMPLE PHYSIOLOGICAL GOITER (HYPER-PLASTIC -PARYNCHYMATOUS – DIFFUSE)	COLLOID GOITER	SNG (SIMPLE NODULAR GOITER)
ETIOLOGY	If STRESS is OVER → Complete involution (UNCOMMON) OR incomplete involution → PARENCHYMATOUS GOITER	<ul style="list-style-type: none"> If STRESS is PROLONGED → gland BECOMES EXHAUSTED → hyper-involution I_2 THERAPY → follicles ARE DISTENDED with thyroglobulin → Colloid Goitre. 	<ul style="list-style-type: none"> If STRESS is REPEATED → Repeated fluctuation of TSH → cycles of hyperplasia & involution → HGE & CENTRAL NECROSIS + fibrous T. AROUND THE NODULES. FORMS = SMNG OR Solitary Nodule.
CL./P	<ul style="list-style-type: none"> FEMALE in puberty. PREGNANCY & LOCATION. 	<ul style="list-style-type: none"> FEMALE 20 – 30 ys. 	<ul style="list-style-type: none"> FEMALES 30 – 40 ys. (M/C type) Mic: multiple nodules = incomp. fibrous capsule.
SYMPTOMS	Painless mild ENLARGEMENT of gland.	PRESSURE ON TRACHEA.	<ul style="list-style-type: none"> Painless swelling in neck & COSMETIC disfig.
SIGNS	GENERAL = NAD. (no signs of toxicity)	GENERAL = NAD. (no signs of toxicity)	GENERAL = NAD.
	<p><u>LOCAL = THYROID GLAND:</u></p> <ul style="list-style-type: none"> SIZE → mild ++. SHAPE → Diffuse. SURFACE → smooth - mobile, SYMMETRIC. CONSIST. → fleshy. No TOXIC, PRESSURE OR INFILTRATIVE SIGNS. 	<p><u>LOCAL = THYROID GLAND:</u></p> <ul style="list-style-type: none"> SIZE → Mod. OR MAYBE HUGE. SHAPE → Diffuse. SURFACE → smooth – SYMMETRICAL. CONSIST. → Soft. <p><u>INVEST. = TNT + LARYNGOSCOPY</u></p> <ol style="list-style-type: none"> T_3 & T_4 ARE (N) + slight ↑ in TSH. Neck US → solid or cystic esp. if STN? / diffuse OR nodular. TH. SCAN → cold dt fibrous T. LARYNGOSCOPY for MLI (idiopathic VC paralysis) BIOPSY → TO EXCLUDE malig. (histological surprise) 	<p><u>LOCAL = THYROID GLAND:</u></p> <ul style="list-style-type: none"> SITE → lower part of the neck. SIZE → mild to huge. SHAPE → butterfly OR irregular. SURFACE → micro nodular. SKIN OVER → (N) SP. CCC. → MOVES with deglutition. CONSIST. → firm OR fleshy. <p><u>COMPLICATIONS:</u></p> <ul style="list-style-type: none"> 2 changes → Toxic in 25 % OR Malig. (FTC) 2 → Cystic degen. + HGE → s. pain & suffocation dt compr. on trachea + reflex spasm of the pre-tracheal ms. → impaired venous drainage of the lx & laryngeal edema! PRESSURE → MEDIASTINAL S
TTT.	<ul style="list-style-type: none"> REASSURANCE. (VENUS neck) L-thyroxine. (0.3 mg/day) 	<ul style="list-style-type: none"> L-thyroxine → ↓ its size → th. trial. STI for huge goiter OR failed medical. 	<ul style="list-style-type: none"> STI + L-THYROXINE till MENOPAUSE TO AVOID RECURRENCE! TOTAL THYROIDECTOMY TO AVOID RECURRENCE & AVOID COMPLETION thyroidectomy in histological surprise. TOTAL LOBECTOMY of ! affected part + STL for ! other part. MEDICAL ONLY if the nodules < 1 cm.

GRAVE'S DISEASE

CL./P

AUTO- immune ds. = Type V hypersensitivity:

- Ag = TSH RS ON follicular cells.
- Ab = TSH-Rab (IgG) → CROSS ANTIGENICITY with Eye – ms. – skin.

INVEST.

THYROID

- **SIZE** → LOWER NECK.
- **SIZE** → slight to mod. ++
- **SHAPE** → symmetrical.
- **SURFACE** → smooth.
- **CONSIST.** → Soft.
- **SP. CCC.** → MOVES up with deglutation.
- **SKIN OVERLYNIG** → WARM.
- **EDGE** → well defined.
- **PULSATIONS & THRILL AT THE UPPER POLE.**

SYMPTOMS

SYSTEMIC

- 1) **METABOLIC** → ↑ Appetite but ↓ Wt, ↑ SWEATING
CAN'T TOLERATE HOT WEATHER.
- 2) **NERVOUS** → INSOMNIA, TREMORS, IRRIT., hyper-reflexia.
- 3) **CVS DT ↑ SENSITIVITY TO CIRC. CA:**
 - **RATE:** Tachycardia (palpitation) + sleeping pulse > 90.
 - **CCC:** ↑ SBP + ↓ DBP OR normal di periph. VD
→ bounding pulse. "WATER-HAMMER"
 - **RYTHM:** All types of Arrhythmia BUT NOT HB OR VF.
- 4) **GIT** → loose stools . (hyper-defecation)
- 5) **SEXUAL** → MENORRHAGIA THEN AMEN, Impotence in ♂
- 6) **URINARY** → Polyurea.
- 7) **BONE** → OSTEOPOROSIS → bony aches.

Triad

MYOPATHY (PX.)
(Deltoid & Quadriceps).

DERMOPATHY

- Moist, WARM & SWEATY.
- Clubbing. (Th. acropathy)
- **PRETIBIAL MYXEDEMA.**
- Soft & brittle nails.
- Edema of LL.
(Pitting then Non pitting)

EXOPHTHALMOPATHY

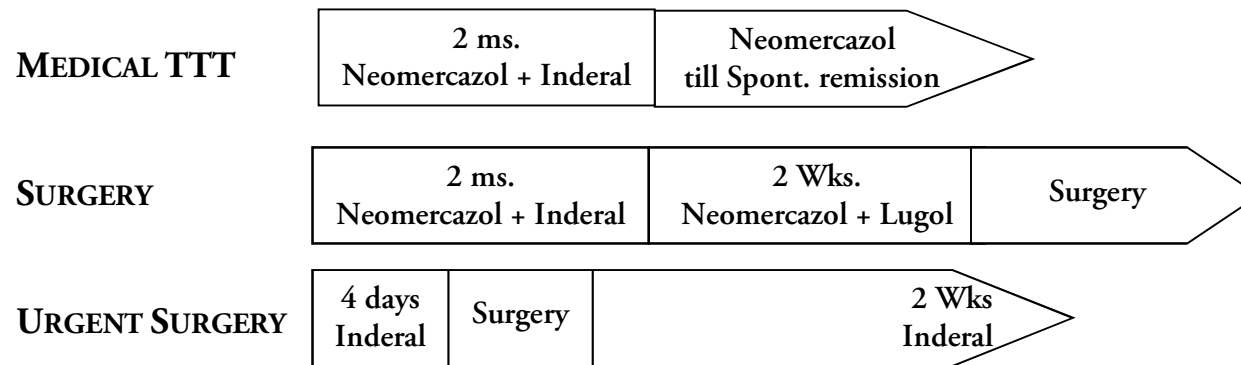

(TRUE) → Diplopia.

INT + LARYNGOSCOPY

- 1) **↑ T₃, T₄ + ↓ TSH.**
- 2) **TRH TEST** → IV TRF doesn't ↑ TSH as its suppressed by T₃, T₄.
- 2) **NECK US** → diffuse OR nodular?
- 3) **Th. SCAN** → HOT SCAN.
- 4) **LARYNGOSCOPE** → for MLI b4 surgery (idiopathic VC paralysis)
- 5) **MISC.** → ECG - ↓ Cholest.
↑ CREATININE - Glycosuria in SEVER cases. (IAG STORAGE CURVE)

TREATMENT of Toxic Goiter

	MEDICAL	SURGICAL	I ¹³¹						
INDIC.	<div>1) 1^{ry} Thyrotoxicosis. (pt < 45 ys)</div> <div>2) Preparation for surgery.</div> <div>3) Contraindications for surgery.</div>	<div>1) 2^{ry} thyrotoxicosis. PROCEDURE	<div><div>1) <u>Neomercazole → (-) Peroxidase enzyme</u><div><div><div><div>Oxidation of iodide to iodine.</div><div>Binding of iodine with tyrosine.</div><div>TSH R Ab production.</div></div><div><div>1st 2ms 10 mg/8 hrs.</div><div>till euthyroid then 5mg/8 hrs.</div></div></div></div></div><div>2) <u>Prophyl thiouracil → (-) Peroxidase enzyme</u><div><div><div>periph. conversion of T₄ to T₃.</div><div>Safer in preg. as it crosses placenta to a ↓ extent.</div></div><div><div>“effect starts to appear after 2 wks, till depletion of the already formed thyroid h. → cont. TTT. for 1.5 ys”</div></div></div></div><div>3) <u>β Blockers (Indral)</u><div><div><div>protect the heart & (-) periph. conversion of T₄ to T₃.</div><div>Given with Neomercazole in the 1st 2 wks. till its effect start to appear & then cont. for 2ms till euthyroid.</div><div>Rapid preparation for Toxic RSG surgery.</div></div></div></div></div>	<div><div><u>Sub-Total Thyroidectomy after prep.</u></div><div><div>“Aim is to ↓ the mass of antigenic gl.</div><div>→ ↓TSH R Ab production!”</div></div></div> <div><u>Pre-op. Preparation:</u><div><div>i) Neomercazol for 2 ms. till Euthyroid.</div><div>ii) <u>Lugol’s iodine at the last 2 wks. to (-) TSH & protease enzyme</u> → colloid accumulates → compress blood vs. → firm ql. & ↓ vascularity.</div><div>iii) <u>β Blockers</u> → few days b4 & 1 wk. post op.</div><div>(Only line of prep. For Toxic RSG <u>or</u> Surgical emergency with Grave’s ds.)</div></div></div>	<div><div><div>I¹³¹ Emits β irradiation</div><div>(low penetrating power so its ineffective in TNG dt fibrosis)</div></div><div>↓</div><div>Destroys the major part of the gland without affecting the surrounding t.</div><div>↓</div><div>Effect appears after 2-3 ms.</div></div>						
DISADV.	<div>1) Prolonged ttt. + HFR! (50 – 60 ys.)</div> <div>2) Impossible to predict when is remission.</div> <div>3) Toxic RSG enlarges → Mediastinal \$!</div> <div>4) <u>S/E of Neomercazole:</u><div><div>Aplastic anemia or agranucytosis → stop the drug + give Penicillin + fresh blood + Vit. B₆</div><div>HS → skin rash & hematuria & liver toxicity.</div></div></div>	<div><div><u>SPECIAL PROBLEMS IN GENERAL:</u></div><div>1) <u>CHILD</u> → Surgery is preferred <i>as medical ttt. has ↑recurrence rate + + I¹³¹ is carcinogenic + S/E of Neom.</i></div><div>2) <u>PREGNANCY:</u><table><tr><td>1st trim.</td><td>2nd trim.</td><td>3rd trim.</td></tr><tr><td>Prophy-lthiouracil <i>doesn’t cross placenta!</i></td><td>Thyroidectomy</td><td>Medical</td></tr></table></div></div>	1 st trim.	2 nd trim.	3 rd trim.	Prophy-lthiouracil <i>doesn’t cross placenta!</i>	Thyroidectomy	Medical	<div>1) Over dose → hypothyroidism after 10 ys. or even with (N) dose after 20 ys.</div> <div>2) Low dose → Recurrence.</div> <div>3) Carcinogenic after 15-20 ys. so avoid using before age of 45 ys.</div> <div>4) Teratogenic # in preg. & lactation⁴</div>
1 st trim.	2 nd trim.	3 rd trim.							
Prophy-lthiouracil <i>doesn’t cross placenta!</i>	Thyroidectomy	Medical							

EXOPHTHALMOS

It is PROTRUSION of the EYE ball due to thyroid disease. (ie. Thyroid proptosis)

- ✓ **FALSE** → DUE TO SPASM of the MULLER MUSCLE.
- ✓ **TRUE** → DUE TO (Exophthalmos Producing FACTOR) EPF. (PART of the AUTO-IMMUNE ds.)

CLINICAL DEGREES:

- **R**osenbach's sign → **T**REMORS ON closing eye lids.
- **S**tellwag's sign → **S**TARRING look + Infrequent blinking
- VON **G**RAEF's sign → Lid **l**ag when th ept. Is asked to look gradually downwards without moving his head.
- **D**alrymple sign → white **r**im of sclera between cornea & upper eye lid.
- **J**offroy's sign → Lack of wrinkling of **f**orehead on looking upwards.
- **M**obius sign → failure of **C**ONVERGENCE.

TREATMENT:

- 1) Head up during sleep.
- 2) Diuretics: → ↓ RETRO-ORBITAL EDEMA.
- 3) Eye drops at day & by Ointment at night.
- 4) Prednisolone (local) → risky if there is VENOUS CONGESTION.
- 5) Lateral Tarsorrhaphy Or Orbital decompression.

TREATMENT THYROTOXICOSIS

1. Antithyroid drugs + small dose of thyroxine → ↓ TSH (EPF follow TSH).
2. If STT → exophthalmos should be static for 6 ms.
